Struggles

```python
42  v  def find_max(flat, relax=5):
43         i = 0
44         j = len(flat) - 1
45         left_max, right_max = flat[i], flat[j]
46         i += 1
47         j -= 1
48
49         idx_left, idx_right = 0, len(flat)-1
50
51         while i<=len(flat)//2:
52             if flat[i] > flat[i-1]:
53                 i += 1
54                 continue
55             elif flat[i-1] > left_max:
56                 idx_left = i-1
57                 left_max = flat[i-1]
58             i += 1
```

Struggles

```
42  ∨    def find_max(flat, relax=5):
43          i = 0
44          j = len(flat) - 1
45          left_max, right_max = flat[i], flat[j]
46          i += 1
47          j -= 1
48
49          idx_left, idx_right = 0, len(flat)-1
50
51          while i<=len(flat)//2:
52              if flat[i] > flat[i-1]:
53                  i += 1
54                  continue
55              elif flat[i-1] > left_max:
56                  idx_left = i-1
57                  left_max = flat[i-1]
58              i += 1
```
Individual:
1. How my old code works?
2. Why my old code doesn't work?
3. How do I undo the change that broke everything?
4. How do I import my scripts?

Struggles

Project workflow

actual work
fixing stuff

Ooops, how do I import it?

Undo, undo, undo…

Damn, how do I publish it?
